We have 40 internationally acclaimed experts in analysis, bio-mathematics, cryptography, financial mathematics, partial differential equations, probability, and statistics. Most of our PhD students receive full financial support (tuition remission and a Graduate Assistantship, a fellowship, or an internship), and most are supported through their entire UC career. Travel support is available for students to attend or present their work at conferences. We have about 45 full-time students in the PhD program, 25 in the MS program, and 15 in the MAT program. We admit 8-10 PhD students each year.

"I found it fascinating to be surrounded by so many people with so many different interests. The diversity I experienced in the UC Math Department was amazing. Through this department, I was able to meet people from across the world, and each one exposed me to something new and exciting both in and out of mathematics. I have made lifelong friendships and feel like the outside world seems a little closer because of it. I have rarely been in an environment like that, where everyone was friendly, curious, and wanted to see you succeed." - Marcos Lopez, PhD graduate, now an Assistant Professor of Mathematics at Midwestern State University, Texas.

"There were great people in the department, whom I admired very much and enjoyed learning from. Their teaching and mentoring to me are lifelong." - Yan Sun, MS Statistics and PhD graduate, now Associate Professor of Mathematics and Statistics at Utah State University.

"The staff are very helpful, and the faculty have high-level academic standards in both teaching and research. Opportunities in the department and across the campus are available to help students succeed in their careers." - Pulong Ma, PhD graduate, now a postdoc at the Statistical and Applied Mathematical Sciences Institute (SAMSI), North Carolina.
