Thanks to All of Our Donors

The department is grateful to all of our donors, both students and past and current faculty, who have helped support our programs and activities. Our gratitude to alumni, staff, faculty and friends extends to those who have supported our department through financial contributions, volunteer work, and other forms of support. We are committed to providing a high-quality education and service to our students, faculty, and the community.

Awards

Several students have received awards for their academic achievements and contributions to the department. For example, the Outstanding Senior in Mathematics award is given to a senior student who has demonstrated exceptional academic performance and contributed significantly to the department.

The department is also proud of the achievements of our students, including their participation in prestigious competitions and academic conferences. Many of our students have been recognized for their outstanding performance in the Advanced Placement Calculus Exam and have won awards at the International Conference on Computability and Logic.

The department is committed to providing opportunities for students to engage in research and gain valuable experience. Many of our students have participated in research projects under the guidance of our faculty members, and several have presented their work at academic conferences and received awards for their research.

We are grateful to all of our donors and supporters for their contributions to the department, and we look forward to continuing our commitment to excellence in mathematics education and research.
Chris McCord, the College’s asociate dean for Academic Affairs, has had a long and productive career in the field of mathematics. He earned his Ph.D. in mathematics from the University of Wisconsin-Madison in 1986. His research has focused on the application of topological methods to the study of dynamical systems. His early work was heavily influenced by Charles C. Conley, one of his teachers at the University of Wisconsin-Madison.

His research interests have included the study of fixed point theories of Lefschetz and Nielsen. He has also worked on the properties of the Conley index and its connection with the classical indices of Morse theory. His work has been heavily influenced by Charles C. Conley, one of his teachers in graduate school.

Chris McCord has been a member of the university faculty since 1986. He has been involved in a number of administrative assignments that have displayed his great affinity for leadership. He has served as chair of the Preparing Faculty Program (1994-98), chair of the Taft Faculty Executive Board, and associate dean (for Graduate Affairs) of the McMicken College of Arts and Sciences at Northern Illinois University.

Dr. Donald Wright earned his Ph.D. in mathematics at the University of North Carolina in 1968. He has been a faculty member at the University of Cincinnati for over 40 years. His research interests include several areas of mathematics, including topology and fixed point theory.

Dr. Wright is well known for his contributions to the field of topology, particularly in the study of fixed point theorems. He has published extensively on this topic and his work has been widely cited in the literature. He has also been a leader in the development of the field in the United States and abroad. He has served as editor of several mathematical journals and has been a member of the editorial boards of several others.

Dr. Wright is a member of the American Mathematical Society and the Mathematical Association of America. He has been active in the organization of numerous mathematical conferences and has contributed to the field through his editorship of several journals. He has also been involved in the development of mathematical software and has authored a number of textbooks.

Dr. Wright’s contributions to the field of mathematics have been recognized with numerous awards and honors. He has received several grants from the National Science Foundation and has been a fellow of the American Mathematical Society. He has been a member of the editorial board of the American Mathematical Monthly and has served as a consultant for several mathematical journals.

Dr. Wright is a dedicated teacher and has been recognized for his contributions to education. He has taught a variety of courses, including advanced topics in topology and fixed point theory. He has been involved in the development of new courses and has been known for his ability to make complex mathematical concepts accessible to students.

Dr. Wright is a devoted family man and enjoys spending time with his family. He is married with two children and is an active member of several community organizations. He is also an avid supporter of the arts and has been involved in numerous cultural events.

Dr. Wright is a respected member of the academic community and is widely admired for his contributions to mathematics. He has been a leader in the field and has left a lasting legacy through his research and teaching.
