What is dyslexia? Dyslexia is a specific type of learning disability, of neurologic origin that affects reading. Studies show that dyslexia affects approximately 5-15% of the school population nationwide. Students suspected of a learning disability should be comprehensively assessed to identify (1) subtype of dyslexia, (2) strengths and weaknesses, and (3) individualized treatment recommendations. Students who do not respond to reading remediation are good candidates for a comprehensive assessment. Also, experts agree that such an assessment should be done by a clinical psychologist with training in neuropsychology.
**What is a comprehensive assessment?**

You can expect the following:

1. Clinical interview
2. Administration of standardized cognitive and achievement tests
   2.1. Measuring intellectual (IQ), academic, and emotional-behavioral functioning
3. Review of relevant school and/or medical records (if available)
4. Obtain information from collateral sources (e.g., teachers), if necessary and/or available
5. Theory-driven conceptualization of “what is going on”
6. Full psychological report with individualized recommendations
7. Feedback and consultation

**What services do we offer?**

We provide research-based, comprehensive diagnostic assessment of learning disorders among children (grade 2 and above), teens, and adults who are suspected of having specific learning disorders in reading, math, and/or writing. This is all that we do in this particular service, it is our specialty.

**Is my child appropriate for an evaluation?**

For a diagnostic assessment, children must meet all of the following criteria: (1) Must have completed the first grade, (2) No sensory impairment (vision or hearing), (3) English is primary language spoken at home, and (4) No previous diagnosis of Autistic Spectrum Disorder, Intellectual or Cognitive Disability, or Genetic/birth defect (e.g., Spina Bifida, Cerebral Palsy).

**Do we provide reading or math therapy?**

Yes! Our clinic has partnered with the School Psychology Program at the University of Cincinnati to provide evidence-based reading and math intervention. We develop an individualized treatment plan after a comprehensive diagnostic assessment of strengths & weaknesses. Intervention costs are discussed during feedback and consultation.

**How much does an assessment cost?**

We charge $600 for a comprehensive assessment, for children and teens. This covers everything, from the initial clinical interview to the full psychological report and feedback session. Our psychologists are not providers with insurance plans.

**How can you reach us?**

If you are interested in our services, please call 513-556-5559 and leave your name, phone number, and whether you are interested in receiving a comprehensive neuropsychological assessment for you or your child. Someone will return your call within 5 business days. You may also reach us by email at uc.dyslexia@uc.edu. Please also visit us online: artsci.uc.edu/dyslexia
